Brand Identity Manual

Version 1.0 — Confidential

Discover what your data has been trying to tell you.

datascrive.com

01 — BRAND FOUNDATION

Purpose — Why we exist

Small and mid-sized businesses deserve to run on accurate information. We exist to fix the gap between what their digital channels collect and what they actually need to make better decisions.

Mission — What we do every day

We diagnose, rebuild, and maintain the data infrastructure of growing businesses — so owners stop guessing and start knowing.

Vision — Where we're going

A world where every independent business owner has access to the same quality of data insight that enterprise companies take for granted.

Positioning Statement

For small and mid-sized business owners in Canada who make critical decisions based on incomplete or misconfigured digital data, DataScrive is the analytics infrastructure partner that diagnoses what's broken, fixes it properly, and keeps it working — so they finally have real, reliable information to grow with confidence.

The Core Problem We Solve

Most SMB owners don't have bad data because they don't care — they have bad data because their tracking tools were set up poorly, never maintained, or never configured to match how their business actually works. They've been flying blind without knowing it.

02 — BRAND PERSONALITY & VALUES

Brand Archetype

The Trusted Expert — We're the specialist you finally found who explains things clearly, doesn't talk down to you, and actually fixes the problem instead of making it more complicated.

Core Values

CLARITY OVER COMPLEXITY

We translate the technical into the useful. Our job is to make data simple to act on, not impressive to look at.

HONESTY FIRST

We tell clients what's actually wrong, not what's comfortable to hear. Trust is built on truth, not reassurance.

DECISIONS OVER DASHBOARDS

Data is only valuable when it drives action. We measure success by the quality of decisions our clients can make.

ACCOUNTABILITY

We own the outcome. If the data isn't working, we fix it — not explain why it's complicated.

PROGRESSIVE PARTNERSHIP

We start with a project, we stay as a partner. Our goal is to grow alongside the businesses we serve.

ACCESSIBLE EXPERTISE

World-class technical knowledge delivered without intimidation. Every client should feel informed after talking to us, not overwhelmed.

03 — TARGET AUDIENCE (ICP)

ICP 01 — The Ecommerce Owner

Shopify / WooCommerce store • Canada • $500K–$5M annual revenue

Their reality	Runs Google Ads and Meta campaigns but can't tell which ones actually drive purchases. GA4 was installed by a developer who's no longer around. Conversions are tracked inconsistently. Reports show traffic but don't explain why sales fluctuate.
Their frustration	"I'm spending thousands on ads and I honestly don't know what's working." They've tried reading GA4 documentation and gave up. They don't trust their data but don't know how to fix it.
What they need	A clear audit of what's broken, a clean setup that connects to their ad platforms, and monthly maintenance to keep it accurate.
How to reach them	Business outcomes first, technical detail second. Translate everything into: "this will help you spend your ad budget better."

ICP 02 — The Local Business Owner with Digital Presence

Service business / brick-and-mortar + website • Canada • 5–50 employees

Their reality	Has a website that generates leads or bookings. Analytics was set up years ago by whoever built the site. They check it occasionally but don't really understand it. Decisions are mostly made from gut feel or sales volume.
Their frustration	"We get traffic but I don't know where it comes from or why some months are slow." They know their website should give them more information — they just don't know what that looks like.
What they need	A simple, accurate view of how their website generates leads, which channels are worth investing in, and where potential customers are dropping off.
How to reach them	Speak in terms of leads and customers, not sessions and events. Their goal is business growth — we're the connective tissue between their website and that goal.

Shared Pain Point — The Universal Hook

Both profiles are making real business decisions based on data they don't fully trust — and most don't even realize how much they're losing because of it. That's our entry point.

04 — VOICE & TONE

Our Voice — Who We Are (Constant)

DataScrive sounds like a sharp consultant who happens to be warm. We're the person at the table who knows the most about data but doesn't make you feel behind. Confident, specific, and human — never robotic, never jargon-heavy, never condescending.

Do's and Don'ts

WE SOUND LIKE THIS	WE NEVER SOUND LIKE THIS
Clear and specific over vague and technical	Jargon-dumping (bounce rates, attribution windows...)
Confident without being arrogant	Over-promising ("transform your business overnight")
Empathetic to the overwhelmed owner	Alarmist ("your data is a disaster")
Honest about what's broken — and how to fix it	Corporate buzzwords (synergies, leverage, scalable)
Direct. Short sentences. No filler.	Passive or weak ("we try to help you kind of...")
Business-language first, tech only when needed	Preachy or lecturing

Voice in Practice — Before & After

DON'T WRITE THIS

"Our robust analytics optimization solutions leverage best-in-class data infrastructure to maximize your conversion funnel visibility and actionable insights."

WRITE THIS INSTEAD

"Your analytics are probably set up wrong — and that means you're making decisions without the full picture. We find what's missing, fix it, and make sure it stays accurate."

DON'T WRITE THIS

"We are passionate about empowering SMBs to harness the transformative power of data-driven decision making."

WRITE THIS INSTEAD

"Most business owners we work with say the same thing: 'I knew something was off, I just didn't know what.' That's exactly what we fix."

Tone by Channel

Website: Authoritative and reassuring. Grounded in outcomes. Every sentence should make the reader feel like they're in capable hands.

LinkedIn: Conversational, insight-driven. Peer-level dialogue, not a sales pitch. Lead with a real observation, not a product claim.

Email: Direct and personal. One idea per email. Always a clear reason to exist. No generic openers.

Proposals & reports: Precise and credible. Less warmth, more rigor. Still no jargon — translate every technical finding into a business implication.

05 — MESSAGING FRAMEWORK

Tagline

Discover what your data has been trying to tell you.	PRIMARY
Data you can actually use.	ALTERNATIVE
Clean data. Clear decisions.	ALTERNATIVE

Core Message

Most businesses don't have a data problem — they have a setup problem. Their analytics tools are there; they just aren't configured to capture what actually matters. DataScrive fixes that.

Elevator Pitch (30 seconds)

We work with ecommerce stores and local businesses in Canada that have websites and digital channels but can't trust the data they're getting from them. We audit their analytics setup, fix what's broken, and maintain it so they always have accurate information to make real business decisions. Most of our clients realize within the first month that they were missing data they didn't even know they needed.

Audience-Specific Messages

FOR ECOMMERCE OWNERS

"If you can't tell which of your campaigns is actually driving sales — not just clicks — your data setup is the problem. That's fixable."

FOR LOCAL BUSINESS OWNERS

"Your website is generating signals about your customers every day. Most businesses aren't capturing them correctly. We make sure yours does."

06 — VISUAL IDENTITY

Logo Usage

The DataScrive logo consists of the DS monogram mark and the wordmark. "Data" appears in Brand Navy, "Scrive" in Brand Teal. Below are the approved usage variations.

PRIMARY VERSION — LIGHT BACKGROUNDS

Primary version

Use on white or light-gray backgrounds. This is the default version for all marketing materials, documents, and digital surfaces.

DARK / REVERSED VERSION — NAVY BACKGROUNDS

Dark version

Use on Brand Navy or deep-colored backgrounds. White elements replace navy elements. Teal accents remain unchanged.

ICON MARK — STANDALONE USE

Icon mark — standalone

The DS monogram can be used independently as a favicon, social media avatar, or app icon. Minimum size: 32px. At smaller sizes, the internal detail of the mark is lost and the full wordmark should be used instead.

Logo Rules

- Minimum size: full wordmark no smaller than 120px wide in digital, 1.2 inches in print
- Always maintain clear space around the logo equal to the height of the "D" in DataScrive
- Never place on busy, patterned, or photographic backgrounds without a solid color area
- Never stretch, skew, rotate, or alter the proportions of the mark or wordmark
- Never recreate the logo in another font, color, or style
- Never use Brand Teal (#4EC4C4) as the background behind the logo

Color Palette

PRIMARY COLORS

Brand Navy	Deep Teal	Brand Teal
#1C3054	#2A8FA0	#4EC4C4
Dominant. Headings, surfaces, icon.	Secondary. Accents, labels, fills.	Small accents. "Scrive" wordmark.

SUPPORTING COLORS

Cool White	Navy Mid	Warm Amber
#F7F8FC	#2E4470	#F0A830
Page backgrounds, card surfaces.	Secondary text on dark surfaces.	Warmth accent only. Max 1x/page.

Color Usage Rules

- Brand Navy (#1C3054): dominant color — primary headings, logo icon, dark backgrounds, major UI surfaces
- Deep Teal (#2A8FA0): secondary surfaces, section labels, hover states, chart fills, supporting UI elements
- Brand Teal (#4EC4C4): used sparingly — "Scrive" wordmark, small accent elements, icons, active links
- Warm Amber (#F0A830): once per page maximum — warmth signal on key CTAs or hero callouts only

- Cool White (#F7F8FC): all page backgrounds and card surfaces — avoids cold pure white
- Navy Mid (#2E4470): body text and supporting content on dark-color surfaces

> **Strategic note:** *This palette reads technical and authoritative by default. Warmth enters through tone of voice, photography of real people in real environments, and accessible language. Amber is the deliberate warmth signal — deploy it intentionally, not decoratively.*

Typography

RECOMMENDED TYPEFACE — INTER (GOOGLE FONTS, FREE)

Your data has a story. We make sure it's true.

Heading — 500 weight, tight tracking

Most business owners we work with have analytics tools installed. The problem isn't the tool — it's that nobody ever configured it to match how that specific business actually works.

Body — 400 weight, 16px / 1.7 line height

ANALYTICS AUDIT • DATA INFRASTRUCTURE • MONTHLY RETAINER

Label / UI — 500 weight, uppercase, letter-spacing 0.08em

Visual Direction — Do's and Don'ts

VISUAL DO'S	VISUAL DON'TS
Clean layouts with generous white space	All-dark interfaces everywhere (cold, intimidating)
Data visualizations that simplify, not impress	Abstract "data art" or matrix-style aesthetics
Photography: real people, real offices, real screens	Stock photos with people pointing at glowing screens
Icons: minimal, line-style, consistent stroke weight	Neon gradients or overly "tech startup" design
Charts in Navy and Deep Teal as primaries	Rainbow color palettes in charts and graphs

This document is a living reference.

As DataScrive grows, this manual should grow with it.
Update it when new services are added, new audiences are identified, or when the market teaches you something new.
